

# Sweep System

More than 40 years of success is not a coincidence. When Swep was launched, it became an immediate floor cleaning favourite. Being the first pre-prepared system on the market, the Swep system swept the floor with the competitors and set new standards in the cleaning business. Now the new Swep generation or core and specialist application ranges are here – with even better performance, ergonomics and lower total cost-in-use.

## Core Range

80% of your cleaning tasks are related to general floor cleaning, where the cleaning result and speed of cleaning are the most important factors. The SWEP Duo core range comprises three types of mops with different characteristics in three different widths ensuring you benefit from the best solution for effective daily cleaning.

### Swep Duo MicroTech

Low friction, microfibre cleaning performance. Ideal for use on uneven, very dirty and/or untreated surfaces. 35, 50 and 75 cm

### Swep Duo MicroPlus

Highest cleaning performance due to cut pile microfibre construction. Especially effective on sealed and smooth floors. 35, 50 and 75 cm

### Swep Duo MicroCombi

Combines the microfibre cleaning performance of the MicroPlus with the loose dirt removal of MicroTech. 35, 50 and 75 cm

#### Which size is best for you?

Choosing the correct width of mop has a large impact on your overall efficiency, but which width of mop is correct for you?

**35 cm:** Ideal for washrooms and small areas less than 15 m<sup>2</sup>. This size is also ideal for above the floor cleaning tasks such as walls, tables and white-boards.

**50 cm:** Ideal for general cleaning of both large and small areas. The combination of a wide coverage per pass and a lightweight design makes this size the most popular width of mop.

**75 cm:** Ideal for large open spaces with minimal furnishing such as corridors, sports halls etc.

## Specialist Application Solutions

The remainder of your cleaning tasks often have specialist requirements that products designed for general use do not fulfil. The Swep specialist application range comprises specialist mops, high level dusting tools and hand mops. Used in combination with the core range you will have a solution for every daily cleaning task.

#### Heavy dirt removal and high absorbency
